

# Quad Function Generator Model 281

Cycle,  
Attack Decay,  
Attack Hold Decay

## MODES

### Cycle/LFO/Loop

Repeats the AD function, acting as an LFO

### Attack Decay

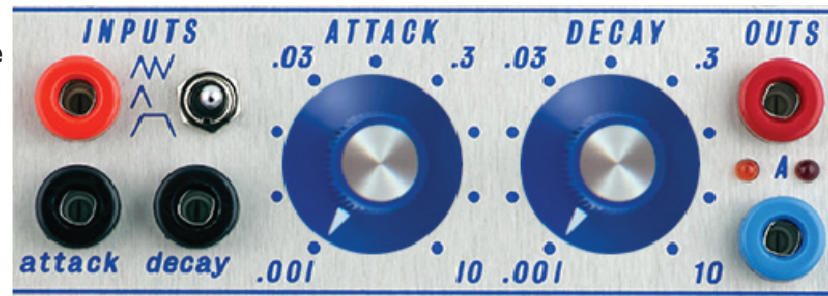

Play the envelope without sustain when triggered at input.

### Attack Hold Decay / Attack Hold Release

Gate/Trigger at input high starts Attack phase. Hold peak level until input is low, then decay to 0.

Mode Switch

Trigger / Gate

Attack Time  
.001 to 10 Seconds

Decay Time  
.001 to 10 Seconds

Set to Local Always!

← Control Voltage Mix Outputs  
Combine A(C) with B(D)

### Quadrature Mode :

Ch.A(C) triggers B(D) at End of Attack Phase,  
creating an offset between the two functions
